["Python is an interpreted high-level general-purpose programming language. Python's design philosophy emphasizes code readability with its notable use of significant indentation. Its language constructs as well as its object-oriented approach aim

to help programmers write clear, logical code for small and large-scale projects", 'Python is dynamically-typed and garbage-collected. It supports multiple programming paradigms, including structured (particularly, procedural),

object-oriented and functional programming. Python is often described as a "batteries included" language due to its comprehensive standard library.']
